

SECURE SEAL

"TRACEABILITY FROM CRADLE TO GRAVE"

CAP IT ON – SEAL IT

Secure Seal is a state-of-the-art container **Tamper Proof Evidence Sealed Cap** that eliminates the hassle of multistep sealing of a container. Our bottle cap style container seal is a one of a kind sealing apparatus, that ensures true and consistent traceability and reliability all with a peace of mind guarantee. Historically sealing of a container or bottle would involve multiple different items and steps, such as cap, tape, wire, metal or plastic seals or even bags and tie wire. With our one-piece twist on cap style seal. We have eliminated the need for multiple steps. Please see below for your consideration.

Our seal design is leak and chemical proof, ensuring a tight liquid seal. Maintaining product integrity and creating a tamper proof seal is why Secure Seal is the easiest and safest seal on the market to date.

The cap is designed with ease of use in mind. Simply tighten the Secure Seal cap onto the container you wish to seal. Note the seal numbers on the cargo manifest / Bill of Lading for security and traceability. The seal stays in tact until the container's cap is removed. Removing the Secure Seal cap shows tamper evidence and cannot be re-sealed with the same cap.

Just twist to remove. It's that simple! When removed the cap splits into two pieces (top and lower sections) leaving a traceable matching seal number on both sections. The bottom section of the cap is secured to the bottle by our Reverse Grip technology. This ensures the bottle stays sealed during transit or retain period. The top section can be screwed back but will leave a tamper proof evidence. The cap cannot be re-sealed on after lab analysis is completed, for retain purposes.

Here at Secure Seal we strive for one goal, to maintain **"Traceability from Cradle to Grave"**
